

Google Summer of Code

Hi Rahat Muneeb,

Congratulations! You have passed the first evaluation. First payments will be sent out after July 19, 2021.

Your mentor(s) provided the following feedback for you:

Rahat, I'm really enjoying the collaboration with you and I hope so do you! One thing you're doing really great is taking the initiative and coming up with ideas/suggestions on your own. That started with you already building prototypes during the application phase and sharing videos of them. And most recently your ideas of the reset button and the hidden issues counter come to mind. I believe that the project currently is just about right on pace. We expected the first half to feel slower because of the time it takes to get ramped-up, but I feel landing the first big changes will happen any day now. If I had to find one point for criticism, then maybe you could be a bit more thorough in the code review process. There still is some room for improvement in uploading code which fully addresses the issues mentioned by code reviewers and which does not contain experimental code anymore. Keep up the great work! I'm looking forward to seeing what you will achieve in the 2nd half!

Google Summer of Code

Hi Rahat Muneeb,

Congratulations! You have successfully passed GSoC 2021!

We hope you have enjoyed working with your organization over the last few months and will continue to work with them and make sure your code that you have worked so hard on over these last few months is integrated into their code base.

Final payments will be sent out after September 01, 2021.

Your mentor(s) provided the following feedback for you:

Rahat, thank you for your great contributions! I enjoyed being your mentor a lot and I hope you did enjoy the project as well. It is my impression that you learned a lot. Your coding skills were already impressive at the very beginning in that you were able to come up with prototypes completely on your own. I hope it was interesting for you to see that sometimes the software development process involves a lot of iterating on different ideas. Sometimes there are unforeseen problems showing up which need to be solved or avoided. I think you did a great job at always staying positive and enthusiastic! You can be proud of the fact that your final contributions will not be hidden behind the experimental flag, but instead will be visible to every user of Chrome DevTools! Hit me up if you're ever in Munich, and I'll be happy to grab lunch with you and show you our office!
